

Sara Kim & Grace Kang

nand2tetris Project 10

Project 10 is supposed to translate .jack files into .xml files. However it does not work correctly (it will only translate a portion of the file).

To compile:

go into the Kim_Sara_Project10/Kang_Grace_Project10 folder from the command prompt/terminal

Once in the folder type:

```
g++ *.cpp          press enter
./a.out FILE_NAME.jack  press enter
```

where FILE_NAME.jack is any Jack file that user wants to translate to .xml file.

It is important that the Jack file that needs to be translated is within the same folder (Kim_Sara_Project10 folder).
